

CONTEXT

THE SPARK

There's a moment every team knows too well. Someone draws a box on a whiteboard and says, "What if we had a tool that could just... do this?"

Everyone nods. It makes perfect sense. And then the energy fades. Because building it means a six-month backlog, procurement, budgets, sign-offs, dev cycles, compliance... all the quiet killers of momentum.

The idea doesn't die in a dramatic way. It just sits there. Until one day, no one even remembers what the box was for.

We started Anbaric for that moment when the spark of potential appears as someone imagines a better way to work. Because now you do have a tool that can just... do this.

WHY ANBARIC

Long before anyone knew what electricity was,
people noticed something strange.

Rub a piece of amber, and it would draw in
straw, feathers, tiny fragments of dust.

It was the first glimpse of power... of potential.

That tiny crackle became the beginning of everything electric.

We chose Anbaric because we believe ideas work the same way.

Every team has potential energy... ideas
sitting still, waiting for a spark.

Our job is to release it.

To turn static into current.

Potential into progress.

That's what Anbaric means to us.

THE CHAL- LENGE

Every company relies on specialist back-office software. Software that runs everything from routine processes to the unique workflows that make a business tick.

But getting the right software is rarely simple.

You can build it, but that takes months of engineering time and endless upkeep. You can buy it, but off-the-shelf tools never quite fit. You can hack something together, but it won't scale. Or you can live without it, and watch good ideas gather dust on the whiteboard.

Anbaric changes this. It lets enterprises build custom back-office software from the ground up in minutes, not months.

POSITIONING

OUR VISION

Imagination has always been humanity's first technology. It's how we see what doesn't exist yet, then find a way to make it real.

That's the spirit behind our vision:

**a world where digital tools can be created
as quickly as they're imagined.**

We see vision as a horizon... something just out of reach, but always guiding us forward. Each time we ask why isn't this true yet?, we discover the next step to make it so.

OUR MISSION

Provide a better alternative to build vs buy: a platform where teams can create secure, reliable, and perfectly tailored internal tools and go live in under two weeks.

VISUAL IDENTITY

OUR MARK

A lot can be said about a logo from a subjective standpoint. How it feels, what it evokes, the emotion it stirs. Those reactions matter, but they are personal.

Objectively, the Anbaric mark is built on geometry, balance, and energy. Its curved forms meet sharp angles, combining precision with adaptability. The repeated quarter circles suggest modularity, with smaller parts coming together to form a complete system. It reflects how we help teams build whole tools from individual components.

The gradient moves from cool blue to warm pink, showing the flow of energy from potential to power. At the centre sits a clear square that represents focus, clarity, and the pause before creation... the moment just before the spark.

Together, these elements express connection, creativity, and transformation. They capture the essence of turning potential into progress.

OUR LOGO

Our logo builds on the Anbaric mark, expanding its shapes and negative space to frame a simple lowercase wordmark. The composition brings structure and openness together, a balance between energy and clarity.

The mark captures motion and creativity, while the wordmark grounds it with calm confidence. Together, they reflect what Anbaric stands for: creative energy shaped into something purposeful and complete.

THE GRID

The human eye is naturally drawn to order. We find comfort in patterns, rhythm, and proportion... things that feel balanced, even before we consciously notice them.

The Anbaric mark is built on a simple 3x3 grid. Every curve, angle, and space aligns within that structure, creating a sense of calm and precision beneath the energy of the form. It feels intuitive because it follows the same visual logic we look for everywhere: symmetry, alignment, and balance.

FULL COLOUR USAGE

The full colour logo and mark should be used only on light, dark, or shadowglass coloured backgrounds.

Avoid using the full colour logo or mark on photographs unless the logo sits on a dark or light area of the image.

ONE COLOUR USAGE

The full colour logo will not perform well on photography and other background colours. In those cases, the one colour logo should be used.

The one colour logo should be used only on colours within the Anbaric colour palette. It should also only be used in shadowglass and white colourways, as shown.

SIZE MATTERS

When it comes to our logo, bigger isn't better. There's no need to shout.

We prefer our logo to stay proportionally small... confident enough to be seen, but never desperate for attention. It doesn't need to fill the page or fight for space. Like good design (and good conversation), it works best when it leaves room to breathe.

Also, to keep the Anbaric logos clear and recognisable, make sure there's enough space between them and anything around it.

We use the circle from our mark as a guide. That radius defines the minimum clear space on all sides. It's a simple way to ensure balance, legibility, and focus wherever the logo appears.

COLOURS

THREE PAIRS

The Anbaric palette is built around three colour pairs:

Svalbard Blue and **Magister Violet** bring clarity and imagination, the cool, electric side of the spectrum.

Aether Pink and **Pan Coral** add warmth and motion, capturing the moment when energy becomes visible.

Asriel Ink and **Shadowglass Navy** ground everything, providing depth, contrast, and focus.

Svalbard Blue #5BC6FF

A cool, electric blue for clarity and focus.

Magister Violet #9D6DFF

A rich violet for creativity and curiosity.

Aether Pink #FF5BBE

A bright pink that carries energy and optimism.

Pan Coral #FF7B94

A warm coral that softens and humanises the palette.

Shadowglass Navy #110B2D

A dark navy for depth, contrast, and quiet focus.

Asriel Ink #322F60

A deep ink tone for grounding and balance.

OTHER COLOURS

To keep the balance, we use a set of neutral tones that sit at the no-colour end of the spectrum. These colours provide contrast and structure without competing with the core palette.

The light neutrals create clarity and space. They work well for backgrounds, cards, and surfaces where content needs to lead.

The dark neutrals bring depth and weight, giving the UI a sense of focus and sophistication.

To provide flexibility tints are allowed of all colour variations.

MESH GRADIENTS

The mesh gradient that runs through the Anbaric mark brings life and dimensionality to a geometric form that's built on precision and structure. Where the grid gives order, the gradient gives energy. The two work together: form and flow, structure and spark.

Use the mesh only within the mark. It's part of the symbol's DNA, not a general background texture.

In digital contexts, subtle motion or parallax can be used, but it should feel ambient, not animated for attention.

Svalbard Blue
#5BC6FF

A cool, electric blue for clarity and focus.

Aether Pink
#FF5BBE

A bright pink that carries energy and optimism.

Magister Violet
#9D6DFF

A rich violet for creativity and curiosity.

Pan Coral
#FF7B94

A warm coral that softens and humanises the palette.

LINEAR GRADIENTS

While the Anbaric mark uses a full mesh gradient, certain UI elements and components use simplified linear gradients based on the brand's colours. These act as accents, moments of energy that bring the interface to life without dominating it.

They appear in small, purposeful ways: glow states, interactive highlights, and depth cues within our soft, neumorphic surfaces.

Remember to keep gradients linear and shallow (around 0–30°). And also avoid strong directional shifts or high contrast.

Svalbard Blue #5BC6FF

A cool, electric blue for clarity and focus.

Magister Violet #9D6DFF

A rich violet for creativity and curiosity.

Aether Pink #FF5BBE

A bright pink that carries energy and optimism.

Shadowglass Navy #110B2D

A dark navy for depth, contrast, and quiet focus.

Pan Coral #FF7B94

A warm coral that softens and humanises the palette.

Asriel Ink #322F60

A deep ink tone for grounding and balance.

**TYPOG-
RAPHY**

A STRONG PAIR

Typography is one of the strongest expressions of Anbaric's character. Our type system pairs Druk, a bold display face with strong structure and energy, with Founders Grotesk, a refined and versatile sans-serif designed for clarity and rhythm.

Druk

Founders Grotesk. She sat up and put her eye to the crack of the door. It was the Butler, coming to trim the lamp as the Master had ordered him to. The common room and the library were lit by anbaric power, but the Scholars preferred the older, softer naphtha lamps in the Retiring Room. They wouldn't change that in the Master's lifetime.

The Butler trimmed the wick, and put another log on the fire as well, and then listened carefully at the hall door before helping himself to a handful of leaf from the smoking stand.

He had hardly replaced the lid when the handle of the

HEAD- LINES

Druk

Designed by Berton Hasebe,
published by Commercial Type.

Druk is our headline typeface.
It's bold, condensed, and built
for moments of emphasis. Used
sparingly, it delivers the precision and
confidence that define Anbaric.

Usage:

- Weight: Bold
- Line height: 90%
- Case: Uppercase
- Tracking: Default or slightly
expanded for large sizes

BRAWNY GODS JUST FLOCKED
UP TO QUIZ AND VEX HIM.

BODY COPY

Founders Grotesk

Designed by Kris Sowersby, published
by Klim Type Foundry (New Zealand).

Founders Grotesk is our primary
typeface for body copy, subheads,
and UI elements. It's versatile,
modern, and legible across weights
— perfect for clear communication
and digital interfaces.

Usage:

- Weight: All (predominantly
Light, Regular, Medium)
- Line height: 120–150%
depending on context
- Case: Sentence case preferred
- Tracking: Default
- Alignment: Flush left, ragged right

TYPE SCALE

Anbaric uses a modular type scale based on the Major Third ratio (≈ 1.250).

Each level grows or shrinks by this consistent proportion, creating a visual rhythm that feels natural and balanced across all devices.

The scale provides flexibility. Designers can start from any base size and apply the ratio to build the hierarchy.

H1

A WIZARD'S JOB IS
TO VEX CHUMPS.

H2

A WIZARD'S JOB IS TO
VEX CHUMPS QUICKLY.

H3

A wizard's job is to vex
chumps quickly in fog.

H4

A wizard's job is to vex
chumps quickly in fog.

H5

A wizard's job is to vex chumps quickly in fog.

H6

A wizard's job is to vex chumps quickly in fog.

P

A wizard's job is to vex chumps quickly in fog.

Sm

A wizard's job is to vex chumps quickly in fog.

BREAK- ING THE SCALE

The type scale exists to create rhythm, not rules. It keeps everyday layouts balanced and cohesive. But when a headline becomes the design, the ratio can bend.

For hero headings, the goal is impact, not proportion. At this scale, you can step outside the ratio. You might scale Druk up to 6× or even 8× your base body size... whatever feels right for the composition.

Remember to always check legibility at real sizes and on real screens. Optical weight matters more than the formula.

DESIGN SYSTEM

(WIP)

INTRO- DUCTION

Our design system exists to keep everything we build consistent, accessible, and fast to ship.

It gives designers and engineers a shared language: a small set of reusable patterns, tokens, and principles. Every decision here aims to balance clarity, performance, and brand expression.

UNITS & SCALE

We use a hybrid unit system that balances accessibility with precision. All typography and spacing use rem units so they scale if users zoom or adjust browser text size. Borders and shadows use px because they don't need to scale. Components may use em if they need to scale relative to their own size.

Key specs:

- Root font size: `html { font-size: 100%; }` (16px default)
- Use rem for type and spacing
- Use px for borders and shadows
- Base spacing grid: 4px increments, typically used as 8pt scale (4 / 8 / 16 / 24 / 32 / 40 / 48 / 64)

BREAK-POINTS & QUERIES

We design mobile-first and use container queries for components, viewport breakpoints for page layout. Breakpoints are defined in rem so they respond correctly to user zoom. Keep layouts fluid between breakpoints rather than snapping abruptly.

Breakpoints:

- sm: 36rem ($\approx$ 576px)
- md: 48rem ($\approx$ 768px)
- lg: 64rem ($\approx$ 1,024px)
- xl: 80rem ($\approx$ 1,280px)
- 2xl: 96rem ($\approx$ 1,536px)

SPACING & LAYOUT

All spacing derives from the base scale. Never hard-code pixel values; use tokens. Layout grids should use multiples of these tokens for columns, gutters, and margins. Consistent spacing keeps interfaces clean and predictable.

Tokens:

- `--space-1:` 0.25rem (4px)
- `--space-2:` 0.5rem (8px)
- `--space-3:` 1rem (16px)
- `--space-4:` 1.5rem (24px)
- `--space-5:` 2rem (32px)
- Grid gutter: 24px

DEPTH & SURFACE

Our visual style uses subtle shadows and elevation to create hierarchy. Keep depth consistent and realistic, one global light source (top-left) and soft, neutral shadows. Depth can also be used for neumorphic or tactile elements if that fits the brand tone.

(Link back to Figma UI once finalised)

Elevation tokens:

- --elev-0: none
- --elev-1: 0 1px 2px rgba(0,0,0,0.06)
- --elev-2: 0 2px 8px rgba(0,0,0,0.08)
- --elev-3: 0 4px 12px rgba(0,0,0,0.12)

Pressed or inset states can use the same values inverted (inset shadows) for tactile feedback.

MOTION & INTER- ACTION

Motion should reinforce hierarchy and provide feedback, never distract. Use it sparingly and consistently. All transitions share the same duration range and easing curves to feel cohesive.

Key specs:

- Duration: 150–300ms
- Easing: ease-out for entry, ease-in for exit
- Obey prefers-reduced-motion
- Hover/active states should have visible feedback (colour, depth, or scale)

**THANK
YOU.**
